## SUMMARY

Full-stack software engineer with 4.5+ years of professional experience building production web apps on **C#/.NET**, **JavaScript/TypeScript/Node** and **Microsoft Azure**. Led a six-person team as interim technical team lead. Programming since 2014. Currently building projects with the help of AI coding agents, while keeping core architecture decisions and final code review in my own hands.

## SKILLS

- **Languages:** C#, TypeScript, Python, JavaScript, SQL, HTML, CSS, Java, Rust
- **Backend:** ASP.NET (MVC, Razor), Entity Framework, Node.js, REST APIs, gRPC APIs
- **Frontend:** Vue.js, Nuxt, React, Next.js, Tailwind CSS
- **Data:** Azure Cosmos DB, PostgreSQL, SQLite, Google Analytics, Power BI
- **Testing:** xUnit, Jest, Vitest
- **DevOps:** Microsoft Azure, AWS, CI/CD pipelines, GitHub Actions
- **AI coding agents:** Claude Code, Gemini, GitHub Copilot
- **Leadership:** Tech team lead, software architecture, project planning, code review, documentation

## EXPERIENCE

**The Really Useful Information Company (TRUIC)** *February 2019 – October 2023*

*Software Engineer → Interim Technical Team Lead*

- Built on top of and maintained an internal CMS that powers three public websites (How To Start An LLC, Startup Savant, and truic.com). The CMS uses an ASP.NET backend, a Vue.js frontend, is backed by Cosmos DB, and is deployed on Azure App Service.
- Shipped full-stack features from prototype to production. Built the database, data model, API endpoints, and frontend UI.
- Built backend services for the public sites and worked on frontend code for their most interactive features, including our business logo generator and business name generator.
- Led a partial move of older JavaScript components to React and TypeScript.
- Ran Azure deployments, scaling, and performance tuning through CI/CD pipelines.
- Wrote Python scripts for the site analytics pipeline and built reports in Google Analytics and Power BI. Used traffic and affiliate click-through metrics to decide which features to build and improve.
- **Interim Technical Team Lead (2022 – 2023):** after the CTO left, led our six-person development team. Ran code review, planned projects, worked on architecture for new features, and kept existing products running smoothly.

**Independent Projects** *2019 – present*

- **Soul Tabletop** (2026 – present; Nuxt 4, Vue 3, TypeScript, PostgreSQL): an open-source web-based virtual tabletop. An in-development version is available at soultabletop.com. Users can write their own game character sheets in a custom markup language with support for formulas and dice rolls. Also includes an account system with per-resource permissions, and built-in support for the Pathfinder game system. Built with AI coding agents.
- **Project Comet** (2024 – present; .NET 10, C#, Unity, WebSockets): experimental framework for small-scale MMOs. Includes an authoritative .NET 10 game server that talks to clients over WebSockets, a Unity package for building clients, and ShapeLand, a playable prototype game built on top of it that runs on desktop PCs and in the browser. Successfully load-tested it with 300 simulated players on AWS. Try ShapeLand at shapeland.lucyawrey.com. Built its most recent version with AI coding agents.
- **Other projects:** my Next.js portfolio site, Lantern (Soul Tabletop's predecessor), a visual novel in Godot, Minecraft mods written in Kotlin, and an N64 game recompilation.

## EDUCATION

**Eastern Michigan University** *2017 – 2020*

Completed three years toward a B.S. in Computer Science

**Washtenaw Technical Middle College** *2014 – 2017*

High school diploma through a dual-enrollment program with Washtenaw Community College, studying computer science. Credits transferred to EMU.
